

Sensitive Data Inventory — AI Email Reply Generator

Company: MDS LLC Last Updated: May 7, 2026

1. Overview

This document inventories all PII and sensitive data that the AI Email Reply Generator processes or stores within the customer’s Salesforce org, and data transmitted to external systems.

2. Data Processed (In-Memory, Not Stored by App)

These data elements are read from standard Salesforce objects during reply generation. They exist in-memory during processing and are not persisted by the app beyond what Salesforce natively stores.

Data Element	Source Object.Field	Contains PII?	Transmitted to AI Provider?	Configurable?
Email subject	EmailMessage.Subject	Potentially	Yes — always included	No
Email body (full thread)	EmailMessage.TextBody / HtmlBody	Yes — may contain any data	Yes — always included (core functionality); HtmlBody used as fallback when TextBody is blank, HTML tags stripped before use	No
Sender email address	EmailMessage.FromAddress	Yes	Yes — if enabled	Yes (Include_Sender__c)
Sender name	EmailMessage.FromName	Yes	Yes — if enabled	Yes (Include_Sender__c)

Data Element	Source Object.Field	Contains PII?	Transmitted to AI Provider?	Configurable?
Recipient email address	EmailMessage.ToAddress	Yes	Yes — if enabled	Yes (Include_Recipient__c)
CC addresses	EmailMessage.CcAddress	Yes	No — read for context only	N/A
Message timestamps	EmailMessage.MessageDate	No	Yes — if enabled	Yes (Include_Timestamp__c)
Message direction	EmailMessage.Incoming	No	Yes — always included	No
Parent record ID	EmailMessage.ParentId	No	No	N/A

3. Data Stored by the App

The app automatically creates a draft record when a reply is sent, to maintain an audit trail of AI-generated content. This data persists in the customer's org until deleted.

AI_Email_Reply_Draft__c

Field	API Name	Data Type	Contains PII?	Description
Draft Number	Name (auto-number)	Text	No	Auto-generated identifier (DRAFT-0000001)
Original Email ID	Original_Email_Id__c	Text	No	Reference to source EmailMessage record
Related Record ID	Related_Record_Id__c	Text	No	Reference to parent record (e.g., Case)
Tone	Tone__c	Text	No	Selected tone (Professional, Friendly, etc.)
Generated Text	Generated_Text__c	Long Text Area	Potentially — contains AI-generated reply based on email content	Original AI output
Edited Text	Edited_Text__c	Long Text Area	Potentially — user-modified version	User's edited version of the draft

Field	API Name	Data Type	Contains PII?	Description
Status	Status__c	Picklist	No	Sent
AI Provider	AI_Provider__c	Text	No	Provider used (openai, anthropic, google, xai)
AI Model	AI_Model__c	Text	No	Model used (gpt-4o, claude-3, etc.)
Token Count	Token_Count__c	Number	No	Tokens consumed for generation
Prompt Template	Prompt_Template__c	Text	No	Template name used
Created By User	Created_By_User__c	Text	Yes — user identifier	User who created the draft

Sharing model: Private — only the record owner can view their drafts. Admins with AI_Email_Reply_Admin permission set have viewAllRecords / modifyAllRecords .

4. Data Transmitted to External Systems

Destination: Customer’s AI Provider (via Named Credential)

Data Element	Purpose	Retention by AI Provider
Email subject	Context for reply generation	Governed by customer’s agreement with their AI provider
Email body (full thread)	Primary input for reply generation	Governed by customer’s agreement with their AI provider
Sender address (if enabled)	Personalization of reply	Governed by customer’s agreement with their AI provider
Recipient address (if enabled)	Context for reply	Governed by customer’s agreement with their AI provider
Message timestamps (if enabled)	Temporal context	Governed by customer’s agreement with their AI provider
Selected tone	Reply style instruction	Governed by customer’s agreement with their AI provider
Prompt template text	AI instructions	Governed by customer’s agreement with their AI provider

MDS LLC does not control data retention at the AI provider. The customer's agreement with their chosen provider governs how transmitted data is processed, stored, and retained.

5. Data NOT Collected or Transmitted

The following data is explicitly **not** collected, stored, or transmitted by the app:

- Salesforce user credentials or session tokens
 - API keys (stored in External Credentials, never accessed by app code)
 - Org metadata or configuration beyond the app's own CMTDs
 - Data from objects other than EmailMessage and the app's own custom object
 - Telemetry, analytics, or usage data to MDS LLC
 - CC/BCC addresses are not sent to the AI provider
-

6. Data Residency

- **Stored data** (drafts, config): Resides in the customer's Salesforce org, subject to the customer's Salesforce data residency settings.
- **Transmitted data**: Routed to the AI provider endpoint configured by the customer. Data residency depends on the customer's choice of AI provider and endpoint region.
- **MDS LLC infrastructure**: None. No ISV-hosted servers, databases, or storage.
